

Component Servicing

Spindles

EuroMaint Industry offers service for most spindle models available on the market.

We are capable of servicing most spindle models and sizes, from modern high-speed spindles of up to 90,000 rpm to large machining spindles with lower rpm. If you like we will come to you to pick up your malfunctioning spindle. Not only do we troubleshoot spindles, we also renovate them, conduct trial runs in our own workshop and provide you with a service report. Due to having our own workshop and excellent relations with stock suppliers we are able to quickly repair malfunctioning spindles. If our customers require we provide storage areas and also storage of spare parts.

If you want to improve the performance of your machine we can reconstruct the spindle for better results. Our long experience of spindle service combined with our firm's extensive know-how of optimizing production enables us to offer you exciting solutions for how to get more out of your machines without making substantial investments.

To provide you with the best possible service we stay open seven days a week.
